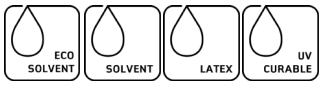
Blockout DuoBanner 480 LUVESS M W FR Technical Datasheet

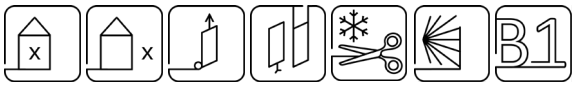
L Latex inks · UV UV curable inks · ES Eco Solvent inks · S Solvent inks . M matt · W White · FR Flame Retardant

Version: 03-2022

Inks



Application and Properties



Technical Data

Basic weight:	approx. 480 g/m²
Thickness:	approx. 300 µm
Composition:	Both sides pvc coated. PES fabric with a black barrier layer
Density:	3,50
Tear strength:	1100 / 1800 N/5 (K/S)
Tear resistance:	45 / 55 N (K/S)
Temp. resistance:	20° C - 70° C
Front and reverse side:	white, matt, smooth
Flame retardancy:	B1 certified according to the DIN 4102-1

General Information

- Polyester fabric coated with PVC on both sides with a black barrier layer
- Printable on both sides with semi-matt surfaces
- No curling, very flat
- Flame retardant properties
- Printable with eco solvent, solvent, UV curing and latex inks
- This material can be eyeleted, welded and sewn
- Water resistant and very good scratch resistance

Application

- Indoor and outdoor advertising
- Developed as a curl-free banner material for various types of display systems such as roll-ups, banners, etc…
  Outdoor banners
  Ceiling hanger

Advantages

- Printable on both sides
- 100% blockout
- Outstanding flatness
- no curling/no bowling character
- Good dimensional stability
- Can be welded, eyeleted and sewn
- Fast drying, no bleeding even with high ink limit
- Scratch resistant

Printing properties

- Drying of the printed material depends heavily on the amount of ink applied. The print must be completely dry before further processing; a drying time of 24 hours is recommended.
- For outdoor use, be ensured that the distance between the circumferential eyelets of banners with eyelets corresponds to the expected weight, e.g. from wind or the banner's own weight.
- VOCs contained in solvent, eco-solvent and latex inks must be completely dried out before further processing.
- To avoid fingerprints, the use of cotton gloves is recommended.
- The optimal condition during processing is 18° C - 25°C and a relative humidity of 40% - 65%.

Processing instructions

- Prints must be completely dry before further processing; a drying time of 24 hours is recommended
- The optimal room climate during processing should be between 18° - 25°C with 40% - 65% RH.

More information

- You can find more information on our products on ***www.com2-c.de***
- The print side of the materials as well as the lengths and widths can be customized to your needs prior to a MOQ
- Always store rolls together with the label or batch number. No complaints can be processed without a batch number.
- Shelf-life of this product is approx.12 months.
- Our tests are carried in standard climate conditions

Available sizes

- 25m x 91,4cm (36´´) |25m x 106,7cm (42´´) | 25m x 127,0cm (50´´) | 25m x 160,0cm (63´´)
